Meeting	Meeting related to In House CMS development
Held on	**26ᵀʰ August 2014 Time : 3.00 PM to 3.30 PM , GMRT conference's room**
Attendees	**NGK, CPK, SNK & RRU**
Agenda	**In House CMS development**
Highlights and items discussed	◆ RRU updated that he has implemented all FPS system commands in Online_V2. ◆ SNK updated that hexagonal grid pointing procedure is completed. - VLA calibrator is available on GMRT web page. ◆ DBB completed Sun coordinate calculation. ◆ CPK updated that he has put indent for server class machine (Dell T420) & three 27' monitor. Rabbit MCM fabrication work is going on. - Started working on FPS system implementation. ◆ SSS sent Email update : 1. Upgraded FITS file converter i.e. it can extract individual source, which is taking less time for analysis as compared to previous analysis.(except few bugs which I have to remove.) 2. Fits conversion can be done for dual freq. (which it was doing in past also) but it is upgraded for individual sources extraction also. 3. Now analysis script can run for flux cal as well as phase cal, as we discussed in last meeting that at the beginning script should run for flux cal only. But It can be run for flux as well as phase cal i.e. both. So as per that I have done relevant modifications in CASAPY script. 4. Front end work is still remaining and I am doing that part also. ◆ NGK informed that maintenance period will start from mid September. She will come GMRT next week, where all team member will discuss what can be done in this maintenance period.
